DETAILED ACTION

Response to Amendment

This Office Action is in response to the amendment, Paper No. 11, filed on March 4, 2003. Accordingly, claims 54 and 55 were amended, and claims 17-23, 25, 58 and 59 remain withdrawn from consideration as being directed to a non-elected invention. Currently, claims 17-23, 25 and 46-59 are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 46 and 48 are rejected under 35 U.S.C. 102(e) as being anticipated by Clementi et al. (U.S. 5,422,291).

Re claim 46, Clementi et al. discloses an integrated circuit device (see Figs. 1-12; cols. 5 and 6) comprising: a substrate 1; a gate structure, wherein the gate structure includes: a gate oxide layer 4 on the substrate 1; a nitride layer 6b on the gate oxide layer 4; and a polysilicon layer 8 over the nitride layer 6b; a channel region under the gate structure; and source/drain regions 11 and 12 in the substrate 1 adjacent the channel region.

Art Unit: 2822

Re claim 48, Clementi et al. discloses that the nitride layer 6b is deposited over the gate oxide layer 4 to a thickness of 12 nm or 120 angstroms (see col. 5, lines 26-42).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 47, 56 and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clementi et al. (U.S. 5,422,291).

Re claims 47, 56 and 57, Clementi et al. fails to show specific dimensional parameters of the nitride layer, gate oxide layer and channel region.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the process of Clementi et al. by selecting such dimensional parameters within the ranges as required by the claims, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges

Art Unit: 2822

involves only routine skill in the art. *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955).

Nonstatutory Type Double Patenting

The **nonstatutory** double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 46-55 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of U.S. Patent No. 5,710,453. Although the conflicting claims are not identical, they are not patentably distinct from each other because the examined claims are either anticipated by, or would have been obvious over the reference claim(s).

Response to Arguments

Applicant's arguments filed March 4, 2003 have been fully considered but they are not persuasive.

Applicants argue that the Restriction Requirement "provides no basis for concluding that forming the oxide layer over the gate structure by chemical vapor deposition is materially different --i.e, patentably distinct-- over forming the oxide layer over the gate structure by

Art Unit: 2822

reoxidation". The Examiner respectfully disagrees because chemical vapor deposition (CVD) and thermal oxidation are two dintinctively well known techniques of forming an oxide layer which can alternatively be used to form the oxide layer over the gate structure of the instant invention. Therefore, the Restriction Requirement is still deemed proper and is therefore made FINAL as previously stated in Paper No. 10.

Applicants argue that "Clementi et al. is silent as to a nitride layer <u>on</u> a gate oxide, depicting and describing instead a nitride layer <u>over</u> the gate oxide". The Examiner agrees that the nitride layer is "over" the gate oxide. However, the Examiner respectfully disagrees because, according to the Merriam-Webster's Collegiate Dictionary, Tenth Edition, the term "on" is also used as a function word to indicate "position in close proximity" with respect to something (see attached copy of page 809 of the Dictionary). Therefore, due to the fact that the nitride layer 6b being in close proximity with the gate oxide layer 4 as shown in FIG. 4-bis, the nitride layer 6b is considered to be positioned <u>on</u> the gate oxide layer 4.

In response to applicant's argument that there is no motivation or incentive for the proposed modification, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992).

Art Unit: 2822

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Duong whose telephone number is (703) 305-1784. The examiner can normally be reached on Monday - Friday (9:00 AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian, can be reached on (703) 308-4905. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-3431 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
